If you have questions to answer and we will be happy to help you. PAVILION 23-P110: How long do I keep the on button to start? He's got trouble getting started with the partner. If I prepare and keep for more than 5 seconds, it doesn't seem like it's not a race. If I press for two seconds, he doesn't see anything in the strike. It's three seconds and one kilometer. It's a way to get a partner. Thank you. I'll wait to answer. Good night. Happytohelp Thank you. I continued playing with the Start button. I found out if you're an onthousand and then let the on button start very well. So I'm staying with this method, and I like it. Thanks again. I have the acer S7 392. How can I turn off the on button? Is there a way to turn off the power button? Most of the PC force at least press the power button for a few seconds before it closes, but this button, which is conveniently located for an accident, immediately stops the machine. Please, someone tells me I can turn it off or put it in the wok with a timer. BTW, love this machine (power button and battery) In this case, follow the steps below to solve the problem:1. click "Start" and select "Control Panel".2. In the control panel search window, look for power options.3 click on "Power Options" and in the window that appears, click on "Choose which power button" option on the list of options on the left panel.4. click the drop-down menu as well as "when press power button" and button". I hope this will help you. I can't see the Start button and I have to turn off my computer using the ignition / stop button When I use Mozilla, I can no longer see the 'Start' button on the bottom left of the computer. The only way to deactivate the computer is to keep the computer xoferiF xoferiF odom le atuceje es on euq ed eser°ÄgesÄ .otse rasuauc arap ecih euq ol ."rewoP" screen (press F11 or Fn + F11 to toggle; Mac: Command + SHIFT + F). If you are in full screen view then hover over with the mouse to the top of the screen to facilitate the bar appear Navigation and tab bar.Click the expand (in the top right Navigation bar) to exit full screen or right-click on a space empty on a toolbar and select "exit full screen" or press the F11 key. Satellite A100-233 - how to use the multimedia buttons in Linux Hello I used to use media keys and ALTLinux on Toshiba Satellite A100-233 (who, under the power button)... Its possible? If so, how? PS: Sorry for my bad English.... If you can answer on Russian... =) Hello Hmm these buttons belongs to a characteristic of Toshiba and this function needs special drivers of Toshiba.Unfortunately, there is no drivers for Linux distributions and that's why I put t think you will get these buttons work after installing Linux. See you soon HP EnvY 700-214: Message "locking of the power button. I am getting an intermittent box appears which says "Power Button lockout". Tour: HP EnvY 700-214 with two display monitors Monitor 1: HP 2010 (DVI) Monitor 2: HP L1950g (VGA) Windows 8.1 Periodically this box appears on the monitor 1.Ä Ä Sometimes the monitor turns off.Ä Ä When I turn it back on, I'll get a surveillance area of the State, which opens by saying: DVI: assets VGA: No Signal 1600 x 900 60 hz Which is curious since the monitor that is upward is the DVI monitor.Ä Ä However, this box disappears after a few seconds. Is the problem with my video card in the computer, or is it with the monitor? [ETA]Ä Ä I stopped and restarted the computer and the monitor and held the key monitor more than 10 seconds, as suggested in other posts found here on this site. [/ETA] Thank you very much.Ä Ä Please let me know if you need more information. Hello @GaryLynnMass, I understand that your computer displays an intermittent button locked" message is displayed on your monitor, and I'd be happy to help you in this case! To avoid this message in the future, I recommend to take a look at the position of Big\_Dave How can I turn off the lock on my HPw1858 monitor switch? If the problem persists, I recommend following the steps below: I provided you with a few steps, you can try below:Step 1. Unplug the power cord at the back of the screen and the wallStep 2. Press and hold the power button for at least a minuteStep 3. Plug the power cable in the monitor, and then to the wall outletStep 4. Press the Menu button on the monitorStep 5. Navigate to the factory reset option and selectStep 6. Try a different cable to connect your monitor to your computer! If the steps above did not resolve your issue, you can try the monitor on a computer or other device to see if the problem persists. Please contact our technical support at the 900-474-6636. If you do not live in the United States / Canada region, please click the link below to get help from your region number, for posting on the HP Forums. Have a great day! Why Satellite Pro A300 does not start when you press the power button? Suddenly my new Satellite Pro A300 does not start correctly when you press the power button. The situation is the following: when I press the power button is displayed the opening of Toshiba (Leading Innovation) and the disappers image quickly. Then there is a black screen for about 30 seconds. There is a rectangular frame with the text Microsoft Corporation under. And nothing happens however long wait. In order to get with the trial starting I then shut down the computer by pressing the power button until the computer turns off. ("The hard way to close")Now, I press the power button shortly to turn on the computer. Then, the computer starts normally with the photo to open Toshiba and after a few seconds, I wonder Open the computer in safe mode or in normal mode. Now I choose to open in normal mode and the computer opens normally and is ready to work. What should I do to get a normal exit procedure? When the laptop starts normally (after choosing the normal mode), stop your laptop correctly using the Start/Physic option. The next release must be normal. When the operating system moves to the bass irregularly, you will always ask how to start this new (safe or normal mode). Same thing happens on my A300 satellite. How to disable the touch buttons on the P500 satellite? I found the tactile buttons on the side of the keyboard under the ignition button of my extremely boring Satallite P500! Does anyone know how to disable? See you soon extremely upset? What are you doing with your hands? I mean, if you don't need them, don't touch them. The P500 satellite is now in front of me and I don't understand how it can be annoying. In any case, if you do not use them, you should remove the support button utility. It's part of the added value package. I don't know if you can remove it as simple, but what you can do is remove the VAP system. After rebooting the VAP installation again (to download from the Toshiba support page) and choose the custom installation. Before the button, remove the check mark from the support utility and continue the installation. I imagine these buttons will be dead and you'll be happy. (:) Goodbye I always need to disconnect, press the power button for 10 seconds. Wait... I bought a HP computer for a few years (Pavilion A6695it), it still works well. But these days, I can't throw. I tried the power button on the front of the computer, nothing happened. Then I searched the HP site. Finally, I find this articleIn the version in English, the article is here: The light of power is on or blinking hello Youlichikka. Welcome to HP forums, I hope you enjoy enjoy experience! To help you get the most out of HP Forums, would you like to draw your attention to the HP Forum Guide for the first time here? Learn to publish and more. I understand that you are not able to on your desk, and I would be happy to help you in this business! According to the document problems of solving problems of energy supply, was he able to follow steps 3 to 9? If so, what were the results? If you arrived at the end of the document, and always empty the power of the computer to turn it on, you can find a replacement (5188-2627) through one of the available sites following this link. I hope this helps! Best regards Satellite L650 does not sometimes start the power button Sometimes when pressing the button works / starts the laptop fan and the laptop does not start. However, when I press it once again it lights up. This doesn't depend on how long you keep keeping the on button to start. Anyone facing this problem. Thank you. What do you mean it doesn't start? Does this mean that the laptop has been closed or has been established for the waiting or hibernation mode? Can you see Toshiba's home screen when you turn on the device? If the fans cling to this means that the laptop has been put under tension, and then the operating system must begin to initialize. PS: It is usually no matter how long the power button can be pressed. The short press (1 seconds) must turn on the laptop. But if you don't want to power OFF using Notepad/Stop works, then you will need to play longer 4 seconds long but it is not recommended that this reset should be made only if the operating system hangs hanging
